Top Skills

Data Analysis
LLM engineering
Python (Programming Language)

Certifications

AI Engineer Core Track: LLM Engineering, RAG, QLORA, Agents
Google Data Analytics Specialization
Google Data Analytics Professional Certificate (v2)

Sergei Maslennikov

LLM Engineer/ AI Practitioner focused on applied LLM systems |
Building RAG, agents & sports analytics
Tallinn, Harjumaa, Estonia

Summary

I build applied AI systems — RAG pipelines, agent workflows, LLM-powered products. Currently shipping weekly: a workout tracker with AI assistant (myfitnesspal.online), a Constitution of Estonia RAG Q&A, and an HR synthetic data generator. Before this, I spent 10 years (2014–2024) as an independent quantitative analyst in sports markets — mainly tennis. The work: feature engineering from match data, probabilistic decision-making with real money on the line, continuous model evaluation under uncertainty. The skills that came out of it — Bayesian reasoning, risk management, checking whether a model is actually right or just looks right — transfer directly to AI engineering. Bachelor of Marine Navigation from TalTech Estonian Maritime Academy; worked briefly as a Deck Officer before shifting to independent analysis. Stack: Python, LangChain/ LangGraph, OpenAI Agents SDK, FastAPI, Chroma, OpenAI & Anthropic APIs, OpenRouter, spec-driven development with Claude Code and Cursor, SQL, React/TypeScript (learning) Open to AI engineering / LLM roles — particularly at companies applying AI to real business workflows. Especially happy to connect with builders in Estonian AI

Experience

self directed
11 years 7 months

AI Implementer (Independent Projects)
December 2024 - Present (1 year 8 months)
Tallinn

Building and shipping applied LLM systems while transitioning into AI engineering full-time.

Recent projects:

- Workout Tracker with AI Assistant — full-stack app deployed at myfitnesspal.online. FastAPI + React/TypeScript + SQLite + LiteLLM/ OpenRouter/Cerebras. Built spec-first with Claude Code. [GitHub]
- Estonia Constitution RAG — document Q&A over the Estonian constitution. Chroma vector DB, OpenAI embeddings, Gemini 2.0 Flash via OpenRouter, grounded generation. [GitHub]
- HR Synthetic Data Generator — first accepted open-source PR to Ed Donner's LLM Engineering course. Synthetic resumes and job postings for NER, matching, and ATS pipeline testing. [GitHub]
Stack: Python, LangChain, FastAPI, Chroma, OpenAI & Anthropic APIs, Claude Code, agent frameworks (MCP, tool use).

Independent Quantitative Analyst — Sports Markets
January 2015 - November 2024 (9 years 11 months)

Independent quantitative analyst in sports markets — primarily tennis and volleyball. That was the work of reading thousands of matches, building features from raw match data, and making probabilistic decisions with real money on the line. It taught me Bayesian reasoning, risk management, and the discipline of evaluating whether a model is actually correct or just looks correct

Hanjin Shipping Europe GmbH & Co KG
Deck Officer

July 2013 - December 2014 (1 year 6 months)

Navigation officer role following graduation from TalTech Estonian Maritime Academy. Sea-going operations, watchkeeping, safety-critical decision-making in high-responsibility environment.

Education

TalTech Estonian Maritime Academy

Bachelor of Marine Navigation · (September 2006 - July 2011)

Coursera

Google Data Analytics Professional Certificate (2025) · (May 2025 - October 2025)

Udemy (instructor Ed Donner)

AI Engineer Core Track: LLM Engineering, RAG, QLORA, Agents · (October 2025 - February 2026)
